Water Detector

Our Water Detector Is Simple And Easy To Use.

Fuel-Guard water detector is Golden Brown in colour and turns Bright Red upon contact with water it will successfully locate the presence of any water in all Diesel Fuels Red + White / Kerosene.

Simply apply the brown water detector onto a clean rod / dipstick or pole approximately where you expect the water level to appear. Then slowly lower it into the tank until the bottom is reached. Remove and observe, the level will appear by a positive contrast of colours. No colour change means no water found. Check our website for a step by step picture demonstration.
